

ResInsight User Course

May 2025

1. Welcome, course layout and introductory remarks
2. ResInsight Introduction and Overview

a) Well Target Mapping2

b) Ensemble Contour Map3

Ceetron Solutions

a) Well Target Mapping

Objective: Identify new well target candidates

1. Import grid data using “Import Eclipse Case” from folder “/model-data/drogon-varying-grid-geometry/realization-0/iter-0/eclipse/model/DROGON-0.EGRID”
2. From the right-click menu of the grid model select “**New Well Target Mapping**”
3. In the **Property Editor**, click **Generate** at the bottom of the properties
The first available view will be updated with the well target candidates
4. Adjust the following threshold values
 - a. Saturation Oil: 0.4
 - b. Transmissibility: 10
5. Click **Generate**, and see change in region identification
6. Select **Cell Result**, and select Result Property **TOTAL_SFIOIL**

<https://resinsight.org/workflows/welltargetmapping>

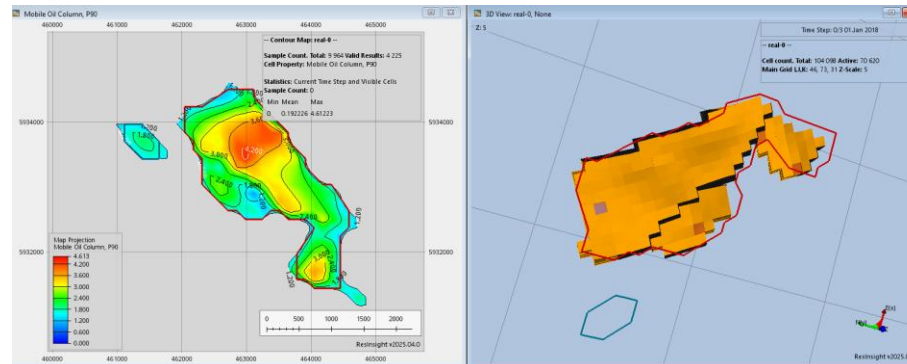

b) Ensemble Contour Map

Objective: Import grid models and create statistics contour map

1. Import ensemble of grid models
 - a. Select **"File->Import->Eclipse Cases->Create Grid Case Ensemble"**.
 - b. Select folder **"model-data/dragon-varying-grid-geometry"**, and press **Search** and **Ok**
2. Expand the **Realizations** folder to verify the import of realizations
3. From the right-click menu of the ensemble "iter-0" select **"New Ensemble Contour Map"**
4. In the **Result Aggregation** dropdown, select **"Mobile Oil Column"** and click **Compute**
5. In the generated contour map, select the **Map Projection** object. Set **Statistics Type** to **P90**
6. Set value filter to **Above** set the value to 3.7. This will remove contour map values below the threshold
7. Inside the plot area of the contour map, select **"Create Polygon From Contour Map"**
8. Activate the 3D view. Right-click on **Cell Filters** and select one of the generated polygons.
9. In the top level **Polygons** object, increase **Line Thickness** to improve polygon visibility
